

Fiberglass Garden and Fountain Pools

Including stream sections and cascades

Fiberglass pools offer a superior solution to liners or concrete. These pools offer an all-season solution that does not need to be drained in the winter, simplifying care while protecting components. Unlike poly and ABS pools that sag or crack under the weight of rocks, fiberglass can be used in or above ground. The result is a quality installation for homeowners and landscape professionals who demand a job done right the first time.

With dozens of shapes and sizes there is a pool to fit most needs. Pools can be ordered with a spillway to form header pools or equipped with fittings for fill and drain lines. Above ground installation is as easy as setting the pool on a level compacted surface and surrounding it with rock or interlocking landscape block. An earth berm and ground cover may be used to surround partial in-ground pools.

The rule of thumb in selecting a fountain pool is that the spray height should not exceed the pool radius. This means a 4' spray in an 8' pool. Because the pool can be installed above grade, this would put the top of the spray at 5' 6" in a typical 18" pool. (We also offer wind controls to bend the rules further!)

The choice of a geometric or freeform shape is a personal one, but a pool with a similar length and width will be better for most spray nozzles. The choice of coping (limestone, rock, etc.) can do as much to influence the "formal" or informal appearance of your project as the pool shape itself.

If you are undecided whether to take the decorative fountain or water garden route, endeavor to select a shape that gives you enough depth and surface area so you can switch at a later date.

Modular designs allow even 14' pools to be shipped to (and through) your door.

Freeform shapes allow water feature construction with a natural appearance. Our largest is 19' long and 2000 gallons!

A garden pool with fish and plants should have depth and volume not to freeze to the bottom in winter or be a thermal yo-yo in the summer.

Fiberglass makes it easy to install the pool just above grade to keep out ground water or add a rock border without crushing the pool.

Atlantic Fountains offers a variety of spillways and bio-filters to complete your project. We can help size the pump and lighting components for the type of project you have in mind.

Models with a few deep shelf areas allow easy access to large potted plants. (FP Series)

Pools fully encircled with a shallow shelf allow a submerged rock border. (FR Series)

Round pools

	Dia	Depth	Gal
R1	24in	12.0in	17
